New password	Nueva contraseña
Confirm password	Confirmar contraseña
Finish password reset	Completar restablecimiento de contraseña
Create new password	Crear nueva contraseña
Please enter your new password	Ingresa tu nueva contraseña
Save changes	Guardar cambios
Enter a new password	Escribe una nueva contraseña
Confirm the new password	Confirma tu nueva contraseña.
Password must be at least 6 characters long.	La contraseña debe tener al menos 6 caracteres.
Passwords don't match	Las contraseñas no coinciden.
Enter email	Ingresa tu correo electrónico.
Reset password	Restablecer contraseña.
Email address	Correo electrónico.
Forgot your password?	¿Olvidaste tu contraseña?
Please enter your email address, and we'll send you a link to reset the password	Ingresa tu correo electrónico y te enviaremos un enlace para restablecer tu contraseña.

Sign in	Iniciar sesión.
Forgot password?	¿Olvidaste tu contraseña?
Sign up	Crear cuenta.
Password	Contraseña.
Welcome back	¡Bienvenido de nuevo!
Please enter your current account email to sign in	Ingresa el correo electrónico de tu cuenta para iniciar sesión.
Don’t have an account?	¿Aún no tienes cuenta?
Incorrect email address	El correo electrónico es incorrecto.
Please recheck the password you've entered	Verifica la contraseña que ingresaste.
Sign up	Crear cuenta.
Create an account	Regístrate.
Please sign up to continue	Crea una cuenta para continuar.
Do you already have an account?	¿Ya tienes cuenta?
Enter the code	Ingresa el código.
Incorrect code	Código incorrecto.
Check your inbox	Revisa tu bandeja de entrada.
Resend in:	Reenviar en:
%s sec	%s segundos.
Continue	Continuar.
RESEND CODE	REENVIAR CÓDIGO.
If you've entered the wrong email, you can always change it	Si has introducido un correo electrónico incorrecto, siempre puedes cambiarlo.
What is Data Breach Monitoring?	¿Qué es la monitorización de filtraciones de datos?
What’s happened	¿Qué ha pasado?

What is device OS updates check?	¿En qué consiste la comprobación de actualizaciones del sistema operativo del dispositivo?
Why is it important to check your operating system?	¿Por qué es importante mantener tu sistema operativo actualizado?
Understanding the potential harm of dangerous files	Entender el daño potencial de los archivos peligrosos.
What is AntiSpy Setup?	¿Qué es la configuración de AntiSpy?
What is a Wi-Fi Scan?	¿Para qué sirve un escaneo de Wi-Fi?
What is a Secure Network?	¿Qué es una red segura?
What is Wi-Fi Security Type?	¿Qué significa el tipo de seguridad de una red Wi-Fi?
You can add up to five emails for Data Breach checking	Puedes añadir hasta cinco correos electrónicos para comprobar si han estado expuestos en filtraciones de datos.
Scammers can use the exposed credentials to gain unauthorized access to your online profiles and acquire sensitive information.	Los estafadores pueden aprovechar las credenciales expuestas para acceder sin permiso a tus perfiles online y robar información sensible.
Our data breach checker vigilantly scans for data breaches 24/7 and immediately alerts you if your data has been compromised.	Nuestro servicio de monitorización de filtraciones de datos funciona las 24 horas del día, los 7 días de la semana, y te avisará de inmediato si detecta que tu información ha sido comprometida.
When a data breach occurs, unauthorized individuals gain access to confidential information stored by an organization. This information may include personal details such as names, addresses, email addresses, passwords, and even financial data like credit card numbers.	Cuando ocurre una filtración de datos, personas no autorizadas consiguen acceder a información confidencial almacenada por una organización. Estos datos pueden incluir información personal como nombres, direcciones, correos electrónicos, contraseñas e incluso detalles financieros, como números de tarjetas de crédito.
Once this information is exposed, it can be used for malicious purposes like identity theft, financial fraud, or unauthorized access to accounts.	Una vez expuesta, esta información puede utilizarse con fines malintencionados, como el robo de identidad, el fraude financiero o el acceso no autorizado a cuentas.
It's important to keep your phone up to date.	Es importante mantener tu teléfono siempre actualizado.
Our app checks for missing updates and guides you through steps to resolve any issues.	Nuestra app comprueba si hay actualizaciones pendientes y te guía paso a paso para solucionarlas sin complicaciones.
An operating system check is crucial as it ensures that the system has the most advanced security protocols, reducing vulnerabilities and potential exploits that could compromise data and system integrity.	Revisar el sistema operativo es fundamental, ya que garantiza que disponga de los protocolos de seguridad más avanzados. Esto reduce vulnerabilidades y posibles ataques que podrían poner en riesgo la integridad de tus datos y del sistema.
Bypassing software restrictions allows the installation of unverified files and software on your device. This poses a significant risk to your device's security.	Saltar las restricciones de software permite instalar archivos y programas no verificados en tu dispositivo, lo que supone un riesgo importante para su seguridad.

It aims to safeguard sensitive information and prevent spying or unauthorized access to personal or confidential data. It will guide you through the most effective steps to ensure data privacy and the best device performance.	El objetivo es proteger tu información sensible y evitar el espionaje o el acceso no autorizado a datos personales o confidenciales. La app te guiará por los pasos más eficaces para garantizar tu privacidad y optimizar el rendimiento del dispositivo.
Wi-Fi Scan analyzes the security of connected networks to prevent unauthorized access and data breaches. This ensures a safer online experience and protects valuable personal information.	El análisis de Wi-Fi evalúa la seguridad de las redes a las que te conectas para evitar accesos no autorizados y filtraciones de datos. Así, disfrutarás de una experiencia online más segura y protegerás tu información personal.
A secure Wi-Fi network uses encryption, firewalls, and strict access controls to secure data transmission and prevent cyber threats, typically requiring a password to join.	Una red Wi-Fi segura utiliza cifrado, cortafuegos y controles de acceso estrictos para proteger la transmisión de datos y prevenir amenazas cibernéticas. Normalmente, requiere una contraseña para conectarse.
Wi-Fi Security Type refers to the protocol used to protect and encrypt data transmitted over a Wi-Fi network, allowing only authorized users to access it. The common types include WEP, WPA, WPA2, and WPA3, with WPA3 offering the highest level of security.	El tipo de seguridad Wi-Fi hace referencia al protocolo utilizado para proteger y cifrar los datos transmitidos en una red, asegurando que solo los usuarios autorizados puedan acceder. Los más comunes son WEP, WPA, WPA2 y WPA3, siendo este último el que ofrece el mayor nivel de seguridad.
Please remove any unused emails to add a new one. What's a security score? What improves your score How we calculate your security score: 85–100 points 50-84 points 0-49 points Your security score shows how exposed your device is to external threats, such as viruses, spyware, or data leaks. Regularly scanning your device for any spyware or suspicious apps Deleting junk and potentially dangerous files from your phone and cloud Monitoring data breaches and making sure to change your passwords or emails if they were ever leaked	Por favor, elimina cualquier correo electrónico que no uses antes de añadir uno nuevo. ¿Qué es la puntuación de seguridad? ¿Qué puede mejorar tu puntuación? Cómo calculamos tu puntuación de seguridad: 85-100 puntos 50-84 puntos 0-49 puntos Tu puntuación de seguridad indica el nivel de exposición de tu dispositivo a amenazas externas, como virus, spyware o filtraciones de datos. Analizar tu dispositivo con regularidad en busca de spyware o aplicaciones sospechosas. Eliminar archivos basura y posibles amenazas de tu teléfono y la nube. Supervisar filtraciones de datos y cambiar tus contraseñas o correos electrónicos si han sido expuestos.

Following our antispy & privacy setup checklists	Seguir nuestras recomendaciones de configuración para mejorar la privacidad y la protección contra el spyware.
Your information was a part of a data leak	Tu información ha sido parte de una filtración de datos.
We have not detected any security threats on your device	No hemos detectado ninguna amenaza de seguridad en tu dispositivo.
You haven't run a security scan in a while	Hace tiempo que no realizas un análisis de seguridad.
If you've scored 100, your device and data are safe and sound—well done! If you're in the 85-99 range, there are a few things that you can do for extra protection, but they don't necessarily require immediate action.	Si has obtenido una puntuación de 100, tu dispositivo y tus datos están seguros. ¡Buen trabajo! Si tu puntuación está entre 85 y 99, hay algunas mejoras que puedes hacer para una protección extra, pero no es urgente.
This means we've detected a minor issue or there's a potential threat to your data. The app might prompt you to update your operating system or to recheck some of the accounts that share the same credentials, which increases their chances of being compromised.	Significa que hemos detectado un problema menor o una posible amenaza para tus datos. La aplicación podría recomendarte actualizar tu sistema operativo o revisar algunas cuentas que comparten las mismas credenciales, ya que esto aumenta el riesgo de ser comprometidas.
If your score is below 50, immediate action is required. This means we've detected spyware, a hacking attempt, or a data leak that could allow someone to access your accounts.	Si tu puntuación es inferior a 50, es necesario actuar de inmediato. Esto significa que hemos detectado spyware, un intento de hackeo o una filtración de datos que podría dar acceso a terceros a tus cuentas.
Mark as done	Marcar como hecho.
Unmark as done	Desmarcar como hecho.
Choose the type of data you'd like to secure, and we'll guide you through all the steps.	Elige qué tipo de datos quieres proteger y te guiaremos paso a paso.
Your setup is complete	Tu configuración está completa.
Your setup progress	Progreso de tu configuración.
Recommended for you	Recomendado para ti.
It aims to safeguard sensitive information and prevent spying or unauthorized access to personal or confidential data.	Su propósito es proteger información sensible y evitar el espionaje o el acceso no autorizado a datos personales o confidenciales.
It will guide you through the most effective steps to ensure data privacy and the best device performance.	Te guiará paso a paso para garantizar la privacidad de tus datos y optimizar el rendimiento de tu dispositivo.
Calls and text messages	Llamadas y mensajes de texto
Social media accounts	Cuentas en redes sociales
Local media files	Archivos multimedia almacenados en el dispositivo
GPS locations	Ubicación GPS
Device security	Seguridad del dispositivo
Online browsing activity	Actividad de navegación en Internet

Here are a few ways how you can protect your calls and texts from unwanted ears and eyes.	Protege tu privacidad
These simple tricks will help you strengthen your phone's security and minimize the possibility of data loss or device malfunctions.	Aquí tienes algunas formas de mantener tus llamadas y mensajes a salvo de miradas y oídos indiscretos.
If you don't want others to know your location, you can hide your actual location.	Si no quieres que otros sepan dónde estás, puedes ocultar tu ubicación.
Stop others from accessing your photos, videos, and other media.	Evita que terceros accedan a tus fotos, vídeos y otros archivos personales.
You might be giving social media apps too much info. It's easy to change that.	Puede que estés compartiendo más información de la que quisieras en redes sociales. Cambiarlo es fácil.
iPhone makes it easy to stay anonymous—as long as you have the right settings enabled.	En iPhone, mantener el anonimato es sencillo si configuras correctamente la privacidad.
Next steps:	Próximos pasos:
Contact your mobile carrier	Contacta con tu operador móvil
See who has access to your calls	Comprueba quién puede acceder a tus llamadas
Review app permissions	Revisa los permisos de las aplicaciones
Use alternative messaging	Prueba opciones de mensajería más seguras
Apps that have access to your microphone may be used to listen in on your calls. Let's check which apps have such permissions.	Las aplicaciones con acceso a tu micrófono pueden estar escuchando tus llamadas. Vamos a revisar qué apps tienen esos permisos.
Permissions check:	Cómo comprobarlo:
Go to your **Settings**	Ve a Ajustes
Find **Privacy & Security** in the list	Busca Privacidad y Seguridad
Choose **Microphone**	Selecciona Micrófono
Look through the list of apps that have access to the microphone	Revisa qué apps tienen acceso
Revoke permissions for the apps you don't trust	Revoca los permisos de aquellas en las que no confíes
Several standard number codes can help you check if someone else has access to your calls. Let's go through them.	Algunos códigos numéricos estándar pueden ayudarte a comprobar si alguien más está accediendo a tus llamadas. Vamos a repasarlos.
List of commonly used codes:	Códigos más utilizados:
#61# to check if your phone has call forwarding enabled	#61# – Comprueba si tienes el desvío de llamadas activado.
#62# to check the status of call forwarding when your number is unreachable	#62# – Verifica si las llamadas se desvían cuando tu número está inaccesible.
#67# to see your call forwarding number	#67# – Muestra a qué número se desvían tus llamadas.
#004# for all forwarding information	#004# – Consulta toda la información sobre los desvíos de llamadas.
##002# or **##21#** to disable all call forwarding options	##002# o ##21# – Desactiva cualquier tipo de desvío de llamadas.

How to use the codes: Go to **Phone** Input one of the codes Tap **Call**	¿Cómo usar los códigos? Abre la aplicación Teléfono. Introduce el código que quieras comprobar. Pulsa el botón de Llamar.
There's a chance your SIM card can be cloned or used to intercept your calls. There are a few ways to make sure this doesn't happen. Secure your SIM: Get in touch with your mobile carrier to find out whether there was any unusual activity connected to your number. Consider getting an eSIM. It can't be cloned or accessed if your phone gets lost or stolen. Check whether your phone number has been a part of a data leak. You can do this through your Secure My Phone dashboard.	Es posible que alguien haya clonado tu tarjeta SIM o la esté usando para interceptar tus llamadas. Aquí tienes algunas formas de evitarlo. Protege tu SIM: Contacta con tu operador móvil para comprobar si ha habido actividad sospechosa en tu línea. Considera usar una eSIM, ya que no se puede clonar ni acceder a ella en caso de robo o pérdida del teléfono. Verifica si tu número ha estado involucrado en una filtración de datos. Puedes hacerlo desde tu panel de Secure My Phone.
Considering how unreliable regular text messaging and calls can be, it is a good idea to choose third-party options with strong encryption protocols. What you should know: It's better to avoid apps with a history of data leaks and scamming activities (WhatsApp, Telegram, etc.) If you often share sensitive or confidential information via texts or calls, consider using Signal. It is one of the most heavily encrypted messengers on the market.	Dado lo poco fiables que pueden ser los mensajes de texto y las llamadas convencionales, es una buena idea optar por alternativas de terceros con protocolos de cifrado sólidos. Lo que debes saber: Es mejor evitar aplicaciones con antecedentes de filtraciones de datos o actividades sospechosas (como WhatsApp, Telegram, etc.). Si sueles compartir información sensible o confidencial por mensaje o llamada, plantéate usar Signal. Es una de las apps de mensajería más seguras del mercado.
Secure your Apple ID Configure your iOS profile Unpair Bluetooth devices Switch to biometric identification	Protege tu Apple ID Configura tu perfil de iOS Desvincula dispositivos Bluetooth Activa la identificación biométrica
When installing an app, it usually requests access to various system features and data, such as your location, camera, and microphone. You shouldn't grant access to this data unless you're sure the app is trustworthy. Let's review all the permissions you gave: Go to **Settings**	Cuando instalas una aplicación, suele pedir acceso a varias funciones del sistema y datos personales, como tu ubicación, cámara o micrófono. No concedas estos permisos a menos que estés seguro de que la app es de confianza. Revisemos los permisos que has concedido: Ve a Ajustes

Open **Privacy & Security**	Abre Privacidad y seguridad
Choose **Microphone** from the list	Selecciona Micrófono de la lista
Go back and do the same for other features like **Camera**, **Locations**, etc.	Vuelve atrás y repite el proceso con Cámara, Ubicación, etc.
Make sure strangers don't have access to your settings. And stop them from managing your settings or adding apps remotely.	Asegúrate de que nadie ajeno tenga acceso a tu configuración ni pueda gestionar o instalar aplicaciones de forma remota:
Open **Settings**	Abre Ajustes
Tap **General**	Pulsa en General
Tap **VPN & Device Management**	Ve a VPN y gestión de dispositivos
Check the profiles listed under VPN	Revisa los perfiles en VPN
Delete anything you don't recognize	Elimina cualquier perfil que no reconozcas
Important: If you use your iPhone for business, your company may have installed a configuration profile, and you won't be able to delete it.	Importante: Si usas tu iPhone para el trabajo, es posible que tu empresa haya instalado un perfil de configuración que no puedas eliminar.
Your Apple ID gives you access to many Apple services. Keep it extra secure by reviewing your trusted devices and setting a strong password.	Tu Apple ID te permite acceder a muchos servicios de Apple. Refuerza su seguridad revisando tus dispositivos de confianza y estableciendo una contraseña robusta.
To review trusted devices:	Para revisar tus dispositivos de confianza:
At the top, tap your name	En la parte superior, toca tu nombre.
Scroll down to review your trusted devices and remove anything you no longer use	Desplázate hacia abajo para ver la lista de dispositivos de confianza y elimina aquellos que ya no utilices.
To strengthen your password:	Para fortalecer tu contraseña:
In **Settings**, tap **Password & Security**	En Ajustes, toca Contraseña y seguridad.
Tap **Change Password** to change your password	Selecciona Cambiar contraseña para actualizarla.
Create a new password with at least 10 characters, and be sure to include numbers, letters, and special characters	Crea una nueva contraseña de al menos 10 caracteres, combinando números, letras y caracteres especiales.
When you're done, go to **Two-Factor Authentication** and set up a trusted phone number	Cuando termines, ve a Autenticación en dos pasos y añade un número de teléfono de confianza.

Your iPhone remembers every Bluetooth device you've ever connected to. If you're no longer using some of these, it's important to remove them.

Tu iPhone recuerda todos los dispositivos Bluetooth a los que te has conectado alguna vez. Si ya no usas algunos, es recomendable eliminarlos.

Tap the little info icon next to a device you no longer need
Tap **Forget This Device**
Disable Bluetooth by toggling it off if you no longer want to connect to other devices

Toca el icono de información junto al dispositivo que quieras eliminar.
Pulsa Olvidar este dispositivo.
Si ya no necesitas conectarte a otros dispositivos, desactiva Bluetooth.

Regular text-based passwords are now considered rather unsafe, as they can be easily cracked. Consider locking your data with Touch/Face ID, as they are more reliable.
Here's how to set up a biometric lock:

Las contraseñas basadas en texto ya no se consideran seguras, ya que pueden ser descifradas con facilidad. Para proteger mejor tus datos, usa Touch ID o Face ID, que son opciones más seguras.
Cómo configurar el desbloqueo biométrico:

Open **Face ID & Passcodes**
Click **Set up Face/Touch ID** and follow the onscreen instructions
Look through the **"USE FACE/TOUCH ID FOR"** list and choose apps and features that you want to lock with Face/Touch ID
Scroll down to the list of features that can be accessed when the device is locked, and make sure that **Wallet** is disabled

Abre Face ID y código.
Pulsa Configurar Face ID/Touch ID y sigue las instrucciones en pantalla.
En la sección Usar Face/Touch ID para, elige las apps y funciones que quieres proteger con este método.
Desplázate hasta la lista de funciones accesibles con el dispositivo bloqueado y asegúrate de que Wallet esté desactivado.

Stop sharing your location in Find My
Reset location & privacy settings
Look for AirTags and other trackers
Review in-app sharing

Deja de compartir tu ubicación en Buscar.
Restablece los ajustes de ubicación y privacidad.
Busca AirTags y otros dispositivos de rastreo.
Revisa qué información compartes dentro de las apps.

Your favorite apps might have access to your exact location. It's easy to change that.

Es posible que algunas de tus aplicaciones favoritas tengan acceso a tu ubicación exacta, pero puedes cambiarlo fácilmente.

Tap **Privacy & Security**
Tap **Location Services**
Remove access for non-essential apps
Turn off Location Services for maximum privacy

Ve a Privacidad y seguridad.
Entra en Servicios de localización.
Elimina el acceso a las aplicaciones que no sean esenciales.
Si prefieres una mayor privacidad, desactiva Servicios de localización.

If you don’t want others to know where you are, turn off location sharing on your iPhone.
Open **Find My**
Tap **Me**
Toggle **Share My Location** off

Si no quieres que otros sepan dónde estás, desactiva la opción de compartir ubicación en tu iPhone.
Abre Buscar.
Pulsa en Yo.
Desactiva Compartir mi ubicación.

If you’re worried that too many apps have access to your location, you can reset everything to factory default settings.

Si crees que demasiadas apps tienen acceso a tu ubicación, puedes restablecer los ajustes de privacidad a los valores de fábrica.

Tap **Transfer or Reset iPhone**
Tap **Reset**
Tap **Reset Location & Privacy**
Enter your password and follow the instructions

Entra en Transferir o restablecer iPhone.
Pulsa en Restablecer.
Selecciona Restablecer ubicación y privacidad.
Introduce tu contraseña y sigue las instrucciones.

AirTags are great for tracking things like your keys. But others can use them to track you.
Check your car for hidden items
Look for trackers in your personal items, like bags and pockets
Find out more about trackers online

Los AirTags son muy útiles para localizar objetos como tus llaves, pero alguien también podría utilizarlos para rastrearte.
Revisa tu coche en busca de objetos desconocidos.
Comprueba si hay rastreadores ocultos en tu bolso, chaqueta o bolsillo.
Descubre cómo detectar estos dispositivos.

Your favorite apps might have access to your location, which means others could see it too.
Google Maps
Messenger
WhatsApp
Telegram
Review app permissions
Make your Apple ID secure
Unpair Bluetooth
Restrict AirDrop
Secure USB connections

Si una aplicación puede acceder a tu ubicación, es posible que otras personas también puedan verla.
Google Maps.
Messenger.
WhatsApp.
Telegram.
Rvisa los permisos de tus apps.
Protege tu ID de Apple.
Desvincula dispositivos Bluetooth innecesarios.
Restringe el uso de AirDrop.
Asegura las conexiones USB.

Your favorite apps might have access to your personal files and folders. It’s easy to change that.

Tus aplicaciones favoritas podrían acceder a tus archivos y carpetas personales, pero puedes controlar este acceso fácilmente.

Tap **Files & Folders**	Selecciona Archivos y carpetas.
Tap **Bluetooth**	Toca Bluetooth.
Prevent others from exploiting AirDrop by turning off file reception.	Evita que otras personas aprovechen AirDrop desactivando la recepción de archivos.
Tap **AirDrop** Make sure **Receiving Off** is checked	Toca AirDrop Asegúrate de que la opción "Recepción desactivada" esté seleccionada.
iPhone can automatically lock down the Lightning port if it has been locked for more than 1 hour. It's a good way to prevent others from connecting to your phone if it's lost or stolen.	El iPhone puede bloquear automáticamente el puerto Lightning si lleva más de una hora bloqueado. Es una buena forma de evitar conexiones no autorizadas en caso de pérdida o robo.
Tap **Face ID & Passcode** or **Touch ID & Passcode**	Toca Face ID y código o Touch ID y código

Turn off **Accessories**

Desactiva la opción Accesorios.

Review Facebook and Messenger
Review Instagram security
Review Snapchat security
Review WhatsApp security
Review TikTok security
Review your other accounts

Revisa Facebook y Messenger
Revisa la seguridad de Instagram
Revisa la seguridad de Snapchat
Revisa la seguridad de WhatsApp
Revisa la seguridad de TikTok
Revisa la seguridad de tus otras cuentas

Your favorite apps might have access to your phone's camera, mic, and more. It's easy to change that.

Algunas de tus aplicaciones favoritas pueden acceder a la cámara, el micrófono y otros elementos de tu teléfono. Puedes cambiar estos permisos fácilmente.

Tap **Camera**

Toca Cámara

Repeat these steps for Mic, Location Services, and more

Repite estos pasos para "Micrófono", "Servicios de ubicación" y otros ajustes.

There's a lot you can do to tighten up your privacy on Facebook and Messenger.
Go through Facebook's Security Checkup
Log out of Facebook on other devices
Review, change, or add your phone number
Control what info you share (and who sees it)
Recover your account if you no longer have access to it

Hay varias formas de mejorar tu privacidad en Facebook y Messenger:

Realiza la Comprobación de seguridad de Facebook
Cierra sesión en Facebook en otros dispositivos
Revisa, cambia o añade tu número de teléfono
Controla qué información compartes y quién puede verla
Recupera tu cuenta si has perdido el acceso

Make sure your Instagram account is as secure as possible.
Go through Instagram's Security Checkup
Check your login history

Asegúrate de que tu cuenta de Instagram sea lo más segura posible:
Realiza la Comprobación de seguridad de Instagram
Revisa tu historial de inicio de sesión

There's a lot you can do to make sure your Snapchat account is secure.
Set up two-factor authentication

Mantén tu cuenta de Snapchat segura con estos consejos:
Activa la autenticación en dos pasos.

Add your email, and then verify it	Añade y verifica tu correo electrónico.
Review privacy settings	Revisa tu configuración de privacidad.
Find out about Ghost Mode	Explora el Modo Fantasma.
It’s easy to lock down your WhatsApp and keep yourself safe.	Protege tu cuenta de WhatsApp y mantente seguro:
Turn on security alerts	Activa las alertas de seguridad.
Review your linked devices and log out of the ones you don’t use	Revisa los dispositivos vinculados y cierra sesión en los que no uses.
Review your phone number	Verifica tu número de teléfono.
Scroll through TikTok safely and secure your account even more.	Usa TikTok de forma segura y refuerza la protección de tu cuenta:
Link your phone number	Vincula tu número de teléfono.
Set a strong password	Elige una contraseña segura.
Review your trusted devices	Revisa tus dispositivos de confianza.
Follow the TikTok security guide	Sigue la guía de seguridad de TikTok.
Choose what to hide on your screen when your phone is locked	Decide qué información se mostrará en la pantalla cuando tu teléfono esté bloqueado.
If you use other social media accounts, please make sure you reviewed the security settings.	Si usas otras redes sociales, revisa su configuración de seguridad:
Browse in Private mode	Navega en modo privado.
Turn off Top Hits	Desactiva Top Hits.
Use a custom DNS	Configura un DNS personalizado.
Block sites from tracking you by browsing in Private mode and prevent Safari from remembering the sites you’ve visited.	Bloquea los sitios que te rastrean navegando en modo privado y evita que Safari recuerde los sitios que has visitado.
Open **Safari**	Abre Safari.
Tap the Tabs button at the bottom	Toca el botón de pestañas en la parte inferior.
Tap **Private**	Selecciona Privado.
Browse your favorite site	Empieza a navegar con mayor privacidad.

Your iPhone preloads top Google results for faster searching, but you may be sharing information with those websites before you even visit them. Turning off this feature helps protect your privacy.	Tu iPhone precarga los principales resultados de Google para acelerar las búsquedas, pero esto puede hacer que compartas información con las webs antes de que las visites. Puedes desactivar esta opción para mejorar tu privacidad.
Tap **Safari** Turn off **Preload Top Hit**	Ve a Safari. Desactiva la opción Precargar Top Hit.
Prevent others from accessing and interfering with your online activity by setting a custom DNS server.	Refuerza tu seguridad online configurando un servidor DNS personalizado.
Tap **Wi-Fi**	Abre los ajustes de Wi-Fi.
Look for the network you're connected to and tap the info icon	Selecciona la red a la que estás conectado y toca el icono de información.
Tap **Configure DNS**	Toca Configurar DNS.
Tap **Add Server**	Selecciona Añadir servidor.
Add **1.1.1.1** and **1.0.0.1**	Introduce 1.1.1.1 y 1.0.0.1.
Repeat these steps for all networks you connect to	Repite estos pasos para todas las redes que uses.
Add new email	Añade un nuevo correo electrónico.
Enter an email you would like to check	Introduce el correo que quieres verificar.
Email address	Dirección de correo electrónico.
Scan	Escanear.
This email was already added	Este correo ya ha sido añadido.
Wrong email format. Please check again	Formato incorrecto. Revísalo e inténtalo de nuevo.
Data Breach Checker	Comprobador de filtraciones de datos
More about this:	Más información sobre esto:
What happened?	¿Qué ha sucedido?
What should I do?	¿Qué debo hacer?
Restore device security:	Restaurar la seguridad del dispositivo:
Update iOS to the newest version:	Actualiza iOS a la versión más reciente:
Go to settings	Ve a configuración.
By taking these steps, you can mitigate the risks associated with data breaches and better protect your personal information from being misused.	Tomando estas medidas, puedes reducir los riesgos de filtraciones de datos y proteger mejor tu información personal para evitar su uso indebido.
No data leaks detected for	No se han detectado filtraciones de datos.

Data leaks detected for	Se han detectado filtraciones de datos.
The data is still loading	Los datos aún se están cargando.
Choose another email	Elige otro correo electrónico.
You can run a data breach scan for any email	Puedes escanear cualquier correo electrónico para comprobar si ha sufrido una filtración de datos.
No data leaks	No se han encontrado filtraciones de datos.
%s data leaks	%s filtraciones de datos detectadas.
We're still loading your data. Please try again	Aún estamos cargando tus datos. Por favor, inténtalo de nuevo más tarde.
Do you want to delete %s	¿Quieres eliminar %s?
This action cannot be undone	Esta acción no se puede deshacer.
Delete email	Eliminar correo electrónico.
Later	Más tarde.
There is nothing matching your request	No hay resultados que coincidan con tu búsqueda.
Please check that the spelling is correct	Por favor, revisa la ortografía e inténtalo de nuevo.
Data leak information is still loading.	La información sobre la filtración de datos aún se está cargando.
Please try again in 30 seconds.	Por favor, inténtalo de nuevo en 30 segundos.
Your data is safe!	¡Tus datos están seguros!
We did not find any data leaks for %s	No hemos encontrado ninguna filtración de datos para %s.
You can scan other emails (yours or your family's) to make sure everything is in order	Puedes escanear otros correos electrónicos (tuyos o de tu familia) para asegurarte de que todo está en orden.
Your email has been compromised.	Tu correo electrónico ha sido comprometido.
Your password has been compromised.	Tu contraseña ha sido comprometida.
Your phone number has been compromised.	Tu número de teléfono ha sido comprometido.
I think it's safe	Creo que es seguro.
If you have fixed all the issues or trust this app/website, mark it as "safe", and we will exclude it from the list of dangers in the next scan.	Si has solucionado todos los problemas o confías en esta app o sitio web, márcalo como "seguro" y lo excluiremos de la lista de riesgos en el próximo escaneo.

You've marked this as safe! If you change your mind - just switch the toggle off.	¡Has marcado esto como seguro! Si cambias de opinión, simplemente desactiva la opción.
Source not found	Fuente no encontrada.
Open the source to fix it manually	Abre la fuente para solucionarlo manualmente.
More Info	Más información.
OS Updates Scan	Escaneo de actualizaciones del sistema operativo.
Update iOS	Actualizar iOS.
Resolve	Resolver.
The iOS version is up to date	Tu versión de iOS está actualizada.
Your iOS version is outdated	Tu versión de iOS está desactualizada.
Updated	Actualizado.
Update available	Actualización disponible.
No risky files detected	No se han detectado archivos de riesgo.
No risky files found on your device	No se han encontrado archivos peligrosos en tu dispositivo.
Manual available	Manual disponible.
The iOS version is up to date	Tu versión de iOS está actualizada.
Your version: %s	Tu versión: %s.
By keeping your software up to date, you can improve your cybersecurity and enjoy a better digital experience	Mantener tu software actualizado mejora tu seguridad y te permite disfrutar de una mejor experiencia digital.
The iOS version is out of date.	Tu versión de iOS está desactualizada.
Your version: %s	Tu versión: %s.
The latest version: %s	Última versión disponible: %s.
Update to the newest iOS version for crucial security and privacy enhancements from Apple.	Actualiza a la versión más reciente de iOS para obtener mejoras cruciales en seguridad y privacidad.
Compromising your device's security poses a significant risk.	Comprometer la seguridad de tu dispositivo supone un riesgo importante.
not found	No encontrado.
Connect to the computer	Conéctate al ordenador.
Enter a Recovery Mode	Entra en modo recuperación.
Restore iOS	Restaurar iOS.
Set up your device	Configura tu dispositivo.
Wait until the restoration is done	Espera hasta que la restauración finalice.
Reinstall the apps	Reinstala las aplicaciones

Restore Data	Restaura tus datos
Use a USB cable to connect your iOS device to a computer with iTunes or Finder installed.	Usa un cable USB para conectar tu iPhone o iPad a un ordenador con iTunes o Finder instalado.
Depending on your device model, you may need to enter Recovery Mode.	Dependiendo de tu modelo de dispositivo, puede que necesites activar el Modo Recuperación antes de continuar.
In iTunes or Finder, locate your device and select the "Restore" option.	En iTunes o Finder, localiza tu dispositivo y selecciona la opción Restaurar. Sigue las indicaciones en pantalla para completar el proceso.
Follow the on-screen prompts to initiate the restoration process.	Una vez restaurado, sigue los pasos en pantalla para configurar el dispositivo como nuevo o restaurarlo desde una copia de seguridad.
Follow the on-screen instructions to set up your device as a new one or restore from a previous backup.	Este proceso puede tardar, ya que iTunes o Finder descargará e instalará la última versión de iOS en tu dispositivo.
The process may take some time as iTunes/Finder downloads the latest iOS firmware and installs it on your device.	Vuelve a instalar cualquier aplicación que tuvieras antes, ya sea desde la App Store o desde tu copia de seguridad.
Reinstall any apps you had previously installed, either from the App Store or from your backup.	Si hiciste una copia de seguridad de tus datos, puedes restaurarlos durante la configuración del dispositivo o más tarde a través de iCloud, iTunes o Finder.
If you backed up your data, you can restore it during the device setup process or through iCloud/iTunes/Finder after setup.	Cambia tus contraseñas.
Change your passwords:	Activa la autenticación en dos factores (2FA).
Enable two-factor authentication (2FA):	Supervisa la actividad en tus cuentas.
Monitor your accounts:	Mantente alerta ante posibles intentos de phishing.
Watch for phishing attempts:	Revisa nuestra app con regularidad.
Regularly check our app:	Actualiza de inmediato las contraseñas de cualquier cuenta que pueda haberse visto comprometida. Usa contraseñas seguras y únicas para cada cuenta. Si lo necesitas, considera utilizar un gestor de contraseñas para generarlas y guardarlas de forma segura.
Immediately update the passwords for this account that may have been compromised. Ensure you use strong, unique passwords for each account. Consider using a password manager to generate and store complex passwords securely.	Siempre que sea posible, activa la autenticación en dos factores en tus cuentas. Esto añadirá una capa extra de seguridad, ya que necesitarás un segundo método de verificación además de tu contraseña.
Where possible, enable two-factor authentication on your accounts. This adds an extra layer of security, requiring a second form of verification in addition to your password.	Revisa periódicamente tus extractos bancarios, los movimientos de tu tarjeta de crédito y otras cuentas financieras. Si detectas alguna transacción inusual o no autorizada, avisa de inmediato a tu banco.
Regularly check your bank statements, credit card statements, and other financial accounts for any unusual or unauthorized transactions. Report any suspicious activity to your financial institution right away.	Ten cuidado con correos electrónicos, mensajes o llamadas en los que te pidan información personal. Los ciberdelincuentes pueden utilizar datos filtrados para intentar engañarte con estafas de phishing.
Be cautious of emails, messages, or phone calls asking for personal information. Cybercriminals may use the information obtained from a data breach to target you with phishing scams.	Usa nuestra app al menos una vez a la semana para que podamos avisarte si detectamos alguna filtración de datos en tus cuentas.
Use our app weekly so we can alert you about any data leaks that may occur within your accounts.	Abre los Ajustes de tu dispositivo
Open your device’s **Settings**	

Click **Software Update**	Haz clic en Actualización de software.
Tap **Automatic Updates**	Pulsa Actualizaciones automáticas.
Turn on **Automatic Install & Download**	Activa Instalación y descarga automática.
Go back to **Software Update** and tap **Update Now**	Vuelve a Actualización de software y pulsa Actualizar ahora.
Last checked %s	Última comprobación %s.

What is a Hidden Camera Scanner?	¿Qué es un escáner de cámaras ocultas?
The Hidden Camera feature allows users to scan their home, hotel rooms, or other spaces for concealed cameras. Special filters enhance visibility, helping to detect potential threats and ensure your privacy and safety.	La función de Cámara Oculta permite a los usuarios escanear su casa, una habitación de hotel u otros espacios en busca de cámaras ocultas. Utiliza filtros especiales que mejoran la visibilidad, ayudando a detectar posibles amenazas y garantizando tu privacidad y seguridad.
How to use	Cómo usarlo
Point the scanner at the laptop camera and select a filter that provides the best visibility. Once you've chosen the appropriate filter, slowly scan the room with the camera to detect any hidden cameras.	Apunta el escáner hacia la cámara del portátil y selecciona el filtro que ofrezca la mejor visibilidad. Una vez elegido, escanea la habitación lentamente con la cámara para localizar posibles dispositivos ocultos.
Tip	Consejo
Close the curtains and turn off the lights to make the room dark.	Cierra las cortinas y apaga las luces para oscurecer la habitación.

Use these filters and move your camera around suspicious devices	Usa estos filtros y mueve la cámara alrededor de dispositivos sospechosos
Secure My Phone doesn’t have permission to use the camera. Please change the privacy settings	Secure My Phone no tiene permiso para usar la cámara. Por favor, ajusta la configuración de privacidad.
Failure to configure camera capture	Error al configurar la captura de la cámara
Hidden Camera Scanner	Escáner de cámara oculta
Permission required	Permiso necesario
You need to grant permission to the Secure My Phone app to block ads and pop-ups.	Debes conceder permiso a la aplicación Secure My Phone para bloquear anuncios y ventanas emergentes.
STEP 1	PASO 1
STEP 2	PASO 2
STEP 3	PASO 3
Open the iPhone Settings app	Abre la app Ajustes en tu iPhone.
Locate and tap Safari, tap Extensions	Busca y pulsa en Safari, luego en Extensiones.
Turn on Secure My Phone	Activa Secure My Phone.

What is AntiSpy Setup?
What is a Wi-Fi Scan?
What is a Secure Network?
What is Wi-Fi Security Type?

You can add up to five emails for Data Breach checking

Scammers can use the exposed credentials to gain unauthorized access to your online profiles and acquire sensitive information.

Our data breach checker vigilantly scans for data breaches 24/7 and immediately alerts you if your data has been compromised.

When a data breach occurs, unauthorized individuals gain access to confidential information stored by an organization.
This information may include personal details such as names, addresses, email addresses, passwords, and even financial data like credit card numbers.

Once this information is exposed, it can be used for malicious purposes like identity theft, financial fraud, or unauthorized access to accounts.
It's important to keep your phone up to date.

Our app checks for missing updates and guides you through steps to resolve any issues.

An operating system check is crucial as it ensures that the system has the most advanced security protocols, reducing vulnerabilities and potential exploits that could compromise data and system integrity.
Bypassing software restrictions allows the installation of unverified files and software on your device. This poses a significant risk to your device's security.

It aims to safeguard sensitive information and prevent spying or unauthorized access to personal or confidential data.

It will guide you through the most effective steps to ensure data privacy and the best device performance.

Wi-Fi Scan analyzes the security of connected networks to prevent unauthorized access and data breaches. This ensures a safer online experience and protects valuable personal information.

A secure Wi-Fi network uses encryption, firewalls, and strict access controls to secure data transmission and prevent cyber threats, typically requiring a password to join.

Wi-Fi Security Type refers to the protocol used to protect and encrypt data transmitted over a Wi-Fi network, allowing only authorized users to access it.

The common types include WEP, WPA, WPA2, and WPA3, with WPA3 offering the highest level of security.

Please remove any unused emails to add a new one.

What's a security score?

What improves your score

How we calculate your security score:

85–100 points

50-84 points

0-49 points

Your security score shows how exposed your device is to external threats, such as viruses, spyware, or data leaks.

Regularly scanning your device for any spyware or suspicious apps

Deleting junk and potentially dangerous files from your phone and cloud

Monitoring data breaches and making sure to change your passwords or emails if they were ever leaked

Following our antispy & privacy setup checklists
Your information was a part of a data leak
We have not detected any security threats on your device
You haven't run a security scan in a while
If you've scored 100, your device and data are safe and sound—well done! If you're in the 85-99 range, there are a few things that you can do for extra protection, but they don't necessarily require immediate action.

This means we've detected a minor issue or there's a potential threat to your data. The app might prompt you to update your operating system or to recheck some of the accounts that share the same credentials, which increases their chances of being compromised.
If your score is below 50, immediate action is required. This means we've detected spyware, a hacking attempt, or a data leak that could allow someone to access your accounts.
Mark as done
Unmark as done
Choose the type of data you'd like to secure, and we'll guide you through all the steps.
Your setup is complete
Your setup progress
Recommended for you

It aims to safeguard sensitive information and prevent spying or unauthorized access to personal or confidential data.
It will guide you through the most effective steps to ensure data privacy and the best device performance.
Calls and text messages
Social media accounts
Local media files
GPS locations
Device security
Online browsing activity

Here are a few ways how you can protect your calls and texts from unwanted ears and eyes.
These simple tricks will help you strengthen your phone's security and minimize the possibility of data loss or device malfunctions.
If you don't want others to know your location, you can hide your actual location.

Stop others from accessing your photos, videos, and other media.
You might be giving social media apps too much info. It's easy to change that.
iPhone makes it easy to stay anonymous—as long as you have the right settings enabled.
Next steps:
Contact your mobile carrier
See who has access to your calls
Review app permissions
Use alternative messaging

Apps that have access to your microphone may be used to listen in on your calls. Let's check which apps have such permissions.
Permissions check:
Go to your **Settings**
Find **Privacy & Security** in the list
Choose **Microphone**
Look through the list of apps that have access to the microphone
Revoke permissions for the apps you don't trust

Several standard number codes can help you check if someone else has access to your calls. Let's go through them.
List of commonly used codes:
#61# to check if your phone has call forwarding enabled
#62# to check the status of call forwarding when your number is unreachable
#67# to see your call forwarding number
#004# for all forwarding information
##002# or **##21#** to disable all call forwarding options

How to use the codes:
Go to **Phone**
Input one of the codes
Tap **Call**

There’s a chance your SIM card can be cloned or used to intercept your calls. There are a few ways to make sure this doesn’t happen.
Secure your SIM:
Get in touch with your mobile carrier to find out whether there was any unusual activity connected to your number.
Consider getting an eSIM. It can’t be cloned or accessed if your phone gets lost or stolen.
Check whether your phone number has been a part of a data leak. You can do this through your Secure My Phone dashboard.

Considering how unreliable regular text messaging and calls can be, it is a good idea to choose third-party options with strong encryption protocols.
What you should know:
It’s better to avoid apps with a history of data leaks and scamming activities (WhatsApp, Telegram, etc.)
If you often share sensitive or confidential information via texts or calls, consider using Signal. It is one of the most heavily encrypted messengers on the market.

Secure your Apple ID
Configure your iOS profile
Unpair Bluetooth devices
Switch to biometric identification

When installing an app, it usually requests access to various system features and data, such as your location, camera, and microphone. You shouldn’t grant access to this data unless you're sure the app is trustworthy.
Let’s review all the permissions you gave:
Go to **Settings**

Open **Privacy & Security**
Choose **Microphone** from the list

Go back and do the same for other features like **Camera**, **Locations**, etc.

Make sure strangers don't have access to your settings. And stop them from managing your settings or adding apps remotely.
Open **Settings**
Tap **General**
Tap **VPN & Device Management**
Check the profiles listed under VPN
Delete anything you don't recognize
Important: If you use your iPhone for business, your company may have installed a configuration profile, and you won't be able to delete it.

Your Apple ID gives you access to many Apple services. Keep it extra secure by reviewing your trusted devices and setting a strong password.
To review trusted devices:

At the top, tap your name
Scroll down to review your trusted devices and remove anything you no longer use
To strengthen your password:
In **Settings**, tap **Password & Security**
Tap **Change Password** to change your password
Create a new password with at least 10 characters, and be sure to include numbers, letters, and special characters
When you're done, go to **Two-Factor Authentication** and set up a trusted phone number

Your iPhone remembers every Bluetooth device you've ever connected to. If you're no longer using some of these, it's important to remove them.

Tap the little info icon next to a device you no longer need
Tap **Forget This Device**
Disable Bluetooth by toggling it off if you no longer want to connect to other devices

Regular text-based passwords are now considered rather unsafe, as they can be easily cracked. Consider locking your data with Touch/Face ID, as they are more reliable.
Here's how to set up a biometric lock:

Open **Face ID & Passcodes**
Click **Set up Face/Touch ID** and follow the onscreen instructions
Look through the **"USE FACE/TOUCH ID FOR"** list and choose apps and features that you want to lock with Face/Touch ID
Scroll down to the list of features that can be accessed when the device is locked, and make sure that **Wallet** is disabled

Stop sharing your location in Find My
Reset location & privacy settings
Look for AirTags and other trackers
Review in-app sharing

Your favorite apps might have access to your exact location. It's easy to change that.

Tap **Privacy & Security**
Tap **Location Services**
Remove access for non-essential apps
Turn off Location Services for maximum privacy

If you don’t want others to know where you are, turn off location sharing on your iPhone.
Open **Find My**
Tap **Me**
Toggle **Share My Location** off

If you’re worried that too many apps have access to your location, you can reset everything to factory default settings.

Tap **Transfer or Reset iPhone**
Tap **Reset**
Tap **Reset Location & Privacy**
Enter your password and follow the instructions

AirTags are great for tracking things like your keys. But others can use them to track you.
Check your car for hidden items
Look for trackers in your personal items, like bags and pockets
Find out more about trackers online

Your favorite apps might have access to your location, which means others could see it too.
Google Maps
Messenger
WhatsApp
Telegram
Review app permissions
Make your Apple ID secure
Unpair Bluetooth
Restrict AirDrop
Secure USB connections

Your favorite apps might have access to your personal files and folders. It’s easy to change that.

Tap **Files & Folders**

Tap **Bluetooth**

Prevent others from exploiting AirDrop by turning off file reception.

Tap **AirDrop**
Make sure **Receiving Off** is checked

iPhone can automatically lock down the Lightning port if it has been locked for more than 1 hour. It's a good way to prevent others from connecting to your phone if it's lost or stolen.

Tap **Face ID & Passcode** or **Touch ID & Passcode**

Turn off **Accessories**

Review Facebook and Messenger
Review Instagram security
Review Snapchat security
Review WhatsApp security
Review TikTok security
Review your other accounts

Your favorite apps might have access to your phone's camera, mic, and more. It's easy to change that.

Tap **Camera**

Repeat these steps for Mic, Location Services, and more

There's a lot you can do to tighten up your privacy on Facebook and Messenger.
Go through Facebook's Security Checkup
Log out of Facebook on other devices
Review, change, or add your phone number
Control what info you share (and who sees it)
Recover your account if you no longer have access to it

Make sure your Instagram account is as secure as possible.
Go through Instagram's Security Checkup

There's a lot you can do to make sure your Snapchat account is secure.
Set up two-factor authentication

Add your email, and then verify it
Review privacy settings
Find out about Ghost Mode

It’s easy to lock down your WhatsApp and keep yourself safe.

Turn on security alerts
Review your linked devices and log out of the ones you don’t use
Review your phone number

Scroll through TikTok safely and secure your account even more.

Link your phone number
Set a strong password
Review your trusted devices
Follow the TikTok security guide

Choose what to hide on your screen when your phone is locked

If you use other social media accounts, please make sure you reviewed the security settings.
Browse in Private mode
Turn off Top Hits
Use a custom DNS

Block sites from tracking you by browsing in Private mode and prevent Safari from remembering the sites you’ve visited.
Open **Safari**
Tap the Tabs button at the bottom
Tap **Private**
Browse your favorite site

Your iPhone preloads top Google results for faster searching, but you may be sharing information with those websites before you even visit them. Turning off this feature helps protect your privacy.

Tap **Safari**
Turn off **Preload Top Hit**

Prevent others from accessing and interfering with your online activity by setting a custom DNS server.

Tap **Wi-Fi**

Look for the network you're connected to and tap the info icon
Tap **Configure DNS**
Tap **Add Server**
Add **1.1.1.1** and **1.0.0.1**
Repeat these steps for all networks you connect to

Reinstall the apps

Restore Data
Use a USB cable to connect your iOS device to a computer with iTunes or Finder installed.
Depending on your device model, you may need to enter Recovery Mode.
In iTunes or Finder, locate your device and select the "Restore" option.
Follow the on-screen prompts to initiate the restoration process.
Follow the on-screen instructions to set up your device as a new one or restore from a previous backup.
The process may take some time as iTunes/Finder downloads the latest iOS firmware and installs it on your device.
Reinstall any apps you had previously installed, either from the App Store or from your backup.

If you backed up your data, you can restore it during the device setup process or through iCloud/iTunes/Finder after setup.
Change your passwords:
Enable two-factor authentication (2FA):
Monitor your accounts:
Watch for phishing attempts:
Regularly check our app:
Immediately update the passwords for this account that may have been compromised. Ensure you use strong, unique passwords for each account. Consider using a password manager to generate and store complex passwords securely.
Where possible, enable two-factor authentication on your accounts. This adds an extra layer of security, requiring a second form of verification in addition to your password.
Regularly check your bank statements, credit card statements, and other financial accounts for any unusual or unauthorized transactions. Report any suspicious activity to your financial institution right away.
Be cautious of emails, messages, or phone calls asking for personal information. Cybercriminals may use the information obtained from a data breach to target you with phishing scams.
Use our app weekly so we can alert you about any data leaks that may occur within your accounts.
Open your device’s **Settings**

Click **Software Update**
Tap **Automatic Updates**
Turn on **Automatic Install & Download**
Go back to **Software Update** and tap **Update Now**

What is a Hidden Camera Scanner?
The Hidden Camera feature allows users to scan their home, hotel rooms, or other spaces for concealed cameras. Special filters enhance visibility, helping to detect potential threats and ensure your privacy and safety.
How to use
Point the scanner at the laptop camera and select a filter that provides the best visibility. Once you've chosen the appropriate filter, slowly scan the room with the camera to detect any hidden cameras.
Tip
Close the curtains and turn off the lights to make the room dark.

Use these filters and move your
camera around suspicious devices
Secure My Phone doesn’t have permission to use the camera. Please change the privacy settings

How it works

What is the Unlock Catcher?
Photos
%s records

%s NEW

You need to grant camera permission to the Secure My Phone App to capture unlocks.

See the faces of anyone who has unlocked your phone, whether it's yours, your loved one's, or an intruder's.

Photos will be stored for one month before being automatically deleted. We recommend promptly reviewing any photos you take to ensure you capture important information.

Turn on the Unlock Catcher tool to discover who uses your phone when it’s not in your hands.

Keep the app open and lock your phone. This will help you reveal the faces of any intruders.

Open the Unlock Catcher report to see photos of everyone who has unlocked your phone.

What is a Wi-Fi Scan?
What is a Secure Network?
What is Wi-Fi Security Type?

You can add up to five emails for Data Breach checking

Scammers can use the exposed credentials to gain unauthorized access to your online profiles and acquire sensitive information.

Our data breach checker vigilantly scans for data breaches 24/7 and immediately alerts you if your data has been compromised.

When a data breach occurs, unauthorized individuals gain access to confidential information stored by an organization.
This information may include personal details such as names, addresses, email addresses, passwords, and even financial data like credit card numbers.

Once this information is exposed, it can be used for malicious purposes like identity theft, financial fraud, or unauthorized access to accounts.
It's important to keep your phone up to date.

Our app checks for missing updates and guides you through steps to resolve any issues.

An operating system check is crucial as it ensures that the system has the most advanced security protocols, reducing vulnerabilities and potential exploits that could compromise data and system integrity.
Bypassing software restrictions allows the installation of unverified files and software on your device. This poses a significant risk to your device's security.

It aims to safeguard sensitive information and prevent spying or unauthorized access to personal or confidential data.

It will guide you through the most effective steps to ensure data privacy and the best device performance.

Wi-Fi Scan analyzes the security of connected networks to prevent unauthorized access and data breaches. This ensures a safer online experience and protects valuable personal information.

A secure Wi-Fi network uses encryption, firewalls, and strict access controls to secure data transmission and prevent cyber threats, typically requiring a password to join.

Wi-Fi Security Type refers to the protocol used to protect and encrypt data transmitted over a Wi-Fi network, allowing only authorized users to access it.

The common types include WEP, WPA, WPA2, and WPA3, with WPA3 offering the highest level of security.

Please remove any unused emails to add a new one.

What's a security score?

What improves your score

How we calculate your security score:

85–100 points

50-84 points

0-49 points

Your security score shows how exposed your device is to external threats, such as viruses, spyware, or data leaks.

Regularly scanning your device for any spyware or suspicious apps

Deleting junk and potentially dangerous files from your phone and cloud

Monitoring data breaches and making sure to change your passwords or emails if they were ever leaked

Following our antispy & privacy setup checklists
Your information was a part of a data leak
We have not detected any security threats on your device
You haven't run a security scan in a while
If you've scored 100, your device and data are safe and sound—well done! If you're in the 85-99 range, there are a few things that you can do for extra protection, but they don't necessarily require immediate action.

This means we've detected a minor issue or there's a potential threat to your data. The app might prompt you to update your operating system or to recheck some of the accounts that share the same credentials, which increases their chances of being compromised.
If your score is below 50, immediate action is required. This means we've detected spyware, a hacking attempt, or a data leak that could allow someone to access your accounts.
Mark as done
Unmark as done
Choose the type of data you'd like to secure, and we'll guide you through all the steps.
Your setup is complete

It aims to safeguard sensitive information and prevent spying or unauthorized access to personal or confidential data.
It will guide you through the most effective steps to ensure data privacy and the best device performance.
Calls and text messages
Social media accounts
Local media files
GPS locations
Device security
Online browsing activity

Here are a few ways how you can protect your calls and texts from unwanted ears and eyes.
These simple tricks will help you strengthen your phone's security and minimize the possibility of data loss or device malfunctions.
If you don't want others to know your location, you can hide your actual location.

Stop others from accessing your photos, videos, and other media.
You might be giving social media apps too much info. It's easy to change that.
iPhone makes it easy to stay anonymous—as long as you have the right settings enabled.
Next steps:
Contact your mobile carrier
See who has access to your calls
Review app permissions
Use alternative messaging

Apps that have access to your microphone may be used to listen in on your calls. Let's check which apps have such permissions.
Permissions check:
Go to your **Settings**
Find **Privacy & Security** in the list
Choose **Microphone**
Look through the list of apps that have access to the microphone
Revoke permissions for the apps you don't trust

Several standard number codes can help you check if someone else has access to your calls. Let's go through them.
List of commonly used codes:
#61# to check if your phone has call forwarding enabled
#62# to check the status of call forwarding when your number is unreachable
#67# to see your call forwarding number
#004# for all forwarding information
##002# or **##21#** to disable all call forwarding options

How to use the codes:
Go to **Phone**
Input one of the codes
Tap **Call**

There’s a chance your SIM card can be cloned or used to intercept your calls. There are a few ways to make sure this doesn’t happen.
Secure your SIM:
Get in touch with your mobile carrier to find out whether there was any unusual activity connected to your number.
Consider getting an eSIM. It can’t be cloned or accessed if your phone gets lost or stolen.
Check whether your phone number has been a part of a data leak. You can do this through your Secure My Phone dashboard.

Considering how unreliable regular text messaging and calls can be, it is a good idea to choose third-party options with strong encryption protocols.
What you should know:
It’s better to avoid apps with a history of data leaks and scamming activities (WhatsApp, Telegram, etc.)
If you often share sensitive or confidential information via texts or calls, consider using Signal. It is one of the most heavily encrypted messengers on the market.

Secure your Apple ID
Configure your iOS profile
Unpair Bluetooth devices
Switch to biometric identification

When installing an app, it usually requests access to various system features and data, such as your location, camera, and microphone. You shouldn’t grant access to this data unless you're sure the app is trustworthy.
Let’s review all the permissions you gave:
Go to **Settings**

Open **Privacy & Security**
Choose **Microphone** from the list

Go back and do the same for other features like **Camera**, **Locations**, etc.

Make sure strangers don't have access to your settings. And stop them from managing your settings or adding apps remotely.
Open **Settings**
Tap **General**
Tap **VPN & Device Management**
Check the profiles listed under VPN
Delete anything you don't recognize
Important: If you use your iPhone for business, your company may have installed a configuration profile, and you won't be able to delete it.

Your Apple ID gives you access to many Apple services. Keep it extra secure by reviewing your trusted devices and setting a strong password.
To review trusted devices:

At the top, tap your name
Scroll down to review your trusted devices and remove anything you no longer use
To strengthen your password:
In **Settings**, tap **Password & Security**
Tap **Change Password** to change your password
Create a new password with at least 10 characters, and be sure to include numbers, letters, and special characters
When you're done, go to **Two-Factor Authentication** and set up a trusted phone number

Your iPhone remembers every Bluetooth device you've ever connected to. If you're no longer using some of these, it's important to remove them.

Tap the little info icon next to a device you no longer need
Tap **Forget This Device**
Disable Bluetooth by toggling it off if you no longer want to connect to other devices

Regular text-based passwords are now considered rather unsafe, as they can be easily cracked. Consider locking your data with Touch/Face ID, as they are more reliable.
Here's how to set up a biometric lock:

Open **Face ID & Passcodes**
Click **Set up Face/Touch ID** and follow the onscreen instructions
Look through the **"USE FACE/TOUCH ID FOR"** list and choose apps and features that you want to lock with Face/Touch ID
Scroll down to the list of features that can be accessed when the device is locked, and make sure that **Wallet** is disabled

Stop sharing your location in Find My
Reset location & privacy settings
Look for AirTags and other trackers
Review in-app sharing

Your favorite apps might have access to your exact location. It's easy to change that.

Tap **Privacy & Security**
Tap **Location Services**
Remove access for non-essential apps
Turn off Location Services for maximum privacy

If you don’t want others to know where you are, turn off location sharing on your iPhone.
Open **Find My**
Tap **Me**
Toggle **Share My Location** off

If you’re worried that too many apps have access to your location, you can reset everything to factory default settings.

Tap **Transfer or Reset iPhone**
Tap **Reset**
Tap **Reset Location & Privacy**
Enter your password and follow the instructions

AirTags are great for tracking things like your keys. But others can use them to track you.
Check your car for hidden items
Look for trackers in your personal items, like bags and pockets
Find out more about trackers online

Your favorite apps might have access to your location, which means others could see it too.
Google Maps
Messenger
WhatsApp
Telegram
Review app permissions
Make your Apple ID secure
Unpair Bluetooth
Restrict AirDrop
Secure USB connections

Your favorite apps might have access to your personal files and folders. It’s easy to change that.

Tap **Files & Folders**

Tap **Bluetooth**

Prevent others from exploiting AirDrop by turning off file reception.

Tap **AirDrop**
Make sure **Receiving Off** is checked

iPhone can automatically lock down the Lightning port if it has been locked for more than 1 hour. It's a good way to prevent others from connecting to your phone if it's lost or stolen.

Tap **Face ID & Passcode** or **Touch ID & Passcode**

Turn off **Accessories**

Review Facebook and Messenger
Review Instagram security
Review Snapchat security
Review WhatsApp security
Review TikTok security
Review your other accounts

Your favorite apps might have access to your phone's camera, mic, and more. It's easy to change that.

Tap **Camera**

Repeat these steps for Mic, Location Services, and more

There's a lot you can do to tighten up your privacy on Facebook and Messenger.
Go through Facebook's Security Checkup
Log out of Facebook on other devices
Review, change, or add your phone number
Control what info you share (and who sees it)
Recover your account if you no longer have access to it

Make sure your Instagram account is as secure as possible.
Go through Instagram's Security Checkup
Check your login history

There's a lot you can do to make sure your Snapchat account is secure.
Set up two-factor authentication

Add your email, and then verify it
Review privacy settings
Find out about Ghost Mode

It’s easy to lock down your WhatsApp and keep yourself safe.

Turn on security alerts
Review your linked devices and log out of the ones you don’t use
Review your phone number

Scroll through TikTok safely and secure your account even more.

Link your phone number
Set a strong password
Review your trusted devices
Follow the TikTok security guide

Choose what to hide on your screen when your phone is locked

If you use other social media accounts, please make sure you reviewed the security settings.
Browse in Private mode
Turn off Top Hits
Use a custom DNS

Block sites from tracking you by browsing in Private mode and prevent Safari from remembering the sites you’ve visited.
Open **Safari**
Tap the Tabs button at the bottom
Tap **Private**
Browse your favorite site

Your iPhone preloads top Google results for faster searching, but you may be sharing information with those websites before you even visit them. Turning off this feature helps protect your privacy.

Tap **Safari**
Turn off **Preload Top Hit**

Prevent others from accessing and interfering with your online activity by setting a custom DNS server.

Tap **Wi-Fi**

Look for the network you're connected to and tap the info icon
Tap **Configure DNS**
Tap **Add Server**
Add **1.1.1.1** and **1.0.0.1**
Repeat these steps for all networks you connect to

Reinstall the apps

Restore Data
Use a USB cable to connect your iOS device to a computer with iTunes or Finder installed.
Depending on your device model, you may need to enter Recovery Mode.
In iTunes or Finder, locate your device and select the "Restore" option.
Follow the on-screen prompts to initiate the restoration process.
Follow the on-screen instructions to set up your device as a new one or restore from a previous backup.
The process may take some time as iTunes/Finder downloads the latest iOS firmware and installs it on your device.
Reinstall any apps you had previously installed, either from the App Store or from your backup.

If you backed up your data, you can restore it during the device setup process or through iCloud/iTunes/Finder after setup.
Change your passwords:
Enable two-factor authentication (2FA):
Monitor your accounts:
Watch for phishing attempts:
Regularly check our app:
Immediately update the passwords for this account that may have been compromised. Ensure you use strong, unique passwords for each account. Consider using a password manager to generate and store complex passwords securely.
Where possible, enable two-factor authentication on your accounts. This adds an extra layer of security, requiring a second form of verification in addition to your password.
Regularly check your bank statements, credit card statements, and other financial accounts for any unusual or unauthorized transactions. Report any suspicious activity to your financial institution right away.
Be cautious of emails, messages, or phone calls asking for personal information. Cybercriminals may use the information obtained from a data breach to target you with phishing scams.
Use our app weekly so we can alert you about any data leaks that may occur within your accounts.
Open your device’s **Settings**

Click **Software Update**
Tap **Automatic Updates**
Turn on **Automatic Install & Download**
Go back to **Software Update** and tap **Update Now**

Consider getting an eSIM. It can’t be cloned or accessed if your phone gets lost or stolen.
Check whether your phone number has been a part of a data leak. You can do this through your Secure My Phone dashboard.

Considering how unreliable regular text messaging and calls can be, it is a good idea to choose third-party options with strong encryption protocols.
What you should know:
It’s better to avoid apps with a history of data leaks and scamming activities (WhatsApp, Telegram, etc.)
If you often share sensitive or confidential information via texts or calls, consider using Signal. It is one of the most heavily encrypted messengers on the market.

Secure your Apple ID
Configure your iOS profile
Unpair Bluetooth devices
Switch to biometric identification

When installing an app, it usually requests access to various system features and data, such as your location, camera, and microphone. You shouldn’t grant access to this data unless you're sure the app is trustworthy.
Let’s review all the permissions you gave:
Go to **Settings**

Open **Privacy & Security**
Choose **Microphone** from the list

Go back and do the same for other features like **Camera**, **Locations**, etc.

Make sure strangers don't have access to your settings. And stop them from managing your settings or adding apps remotely.
Open **Settings**
Tap **General**
Tap **VPN & Device Management**
Check the profiles listed under VPN
Delete anything you don't recognize
Important: If you use your iPhone for business, your company may have installed a configuration profile, and you won't be able to delete it.

Your Apple ID gives you access to many Apple services. Keep it extra secure by reviewing your trusted devices and setting a strong password.
To review trusted devices:

At the top, tap your name
Scroll down to review your trusted devices and remove anything you no longer use
To strengthen your password:
In **Settings**, tap **Password & Security**
Tap **Change Password** to change your password
Create a new password with at least 10 characters, and be sure to include numbers, letters, and special characters
When you're done, go to **Two-Factor Authentication** and set up a trusted phone number

Your iPhone remembers every Bluetooth device you've ever connected to. If you're no longer using some of these, it's important to remove them.

Tap the little info icon next to a device you no longer need
Tap **Forget This Device**
Disable Bluetooth by toggling it off if you no longer want to connect to other devices

Regular text-based passwords are now considered rather unsafe, as they can be easily cracked. Consider locking your data with Touch/Face ID, as they are more reliable.
Here's how to set up a biometric lock:

Open **Face ID & Passcodes**
Click **Set up Face/Touch ID** and follow the onscreen instructions
Look through the **"USE FACE/TOUCH ID FOR"** list and choose apps and features that you want to lock with Face/Touch ID
Scroll down to the list of features that can be accessed when the device is locked, and make sure that **Wallet** is disabled

Stop sharing your location in Find My
Reset location & privacy settings
Look for AirTags and other trackers
Review in-app sharing

Your favorite apps might have access to your exact location. It's easy to change that.

Tap **Privacy & Security**
Tap **Location Services**
Remove access for non-essential apps
Turn off Location Services for maximum privacy

If you don’t want others to know where you are, turn off location sharing on your iPhone.
Open **Find My**
Tap **Me**
Toggle **Share My Location** off

If you’re worried that too many apps have access to your location, you can reset everything to factory default settings.

Tap **Transfer or Reset iPhone**
Tap **Reset**
Tap **Reset Location & Privacy**
Enter your password and follow the instructions

AirTags are great for tracking things like your keys. But others can use them to track you.
Check your car for hidden items
Look for trackers in your personal items, like bags and pockets
Find out more about trackers online

Your favorite apps might have access to your location, which means others could see it too.
Google Maps
Messenger
WhatsApp
Telegram
Review app permissions
Make your Apple ID secure
Unpair Bluetooth
Restrict AirDrop
Secure USB connections

Your favorite apps might have access to your personal files and folders. It’s easy to change that.

Tap **Files & Folders**

Tap **Bluetooth**

Prevent others from exploiting AirDrop by turning off file reception.

Tap **AirDrop**
Make sure **Receiving Off** is checked

iPhone can automatically lock down the Lightning port if it has been locked for more than 1 hour. It's a good way to prevent others from connecting to your phone if it's lost or stolen.

Tap **Face ID & Passcode** or **Touch ID & Passcode**

Turn off **Accessories**

Review Facebook and Messenger
Review Instagram security
Review Snapchat security
Review WhatsApp security
Review TikTok security
Review your other accounts

Your favorite apps might have access to your phone's camera, mic, and more. It's easy to change that.

Tap **Camera**

Repeat these steps for Mic, Location Services, and more

There's a lot you can do to tighten up your privacy on Facebook and Messenger.
Go through Facebook's Security Checkup
Log out of Facebook on other devices
Review, change, or add your phone number
Control what info you share (and who sees it)
Recover your account if you no longer have access to it

Make sure your Instagram account is as secure as possible.
Go through Instagram's Security Checkup

Reinstall the apps

Restore Data
Use a USB cable to connect your iOS device to a computer with iTunes or Finder installed.
Depending on your device model, you may need to enter Recovery Mode.
In iTunes or Finder, locate your device and select the "Restore" option.
Follow the on-screen prompts to initiate the restoration process.
Follow the on-screen instructions to set up your device as a new one or restore from a previous backup.
The process may take some time as iTunes/Finder downloads the latest iOS firmware and installs it on your device.
Reinstall any apps you had previously installed, either from the App Store or from your backup.

If you backed up your data, you can restore it during the device setup process or through iCloud/iTunes/Finder after setup.
Change your passwords:
Enable two-factor authentication (2FA):
Monitor your accounts:
Watch for phishing attempts:
Regularly check our app:
Immediately update the passwords for this account that may have been compromised. Ensure you use strong, unique passwords for each account. Consider using a password manager to generate and store complex passwords securely.
Where possible, enable two-factor authentication on your accounts. This adds an extra layer of security, requiring a second form of verification in addition to your password.
Regularly check your bank statements, credit card statements, and other financial accounts for any unusual or unauthorized transactions. Report any suspicious activity to your financial institution right away.
Be cautious of emails, messages, or phone calls asking for personal information. Cybercriminals may use the information obtained from a data breach to target you with phishing scams.
Use our app weekly so we can alert you about any data leaks that may occur within your accounts.
Open your device’s **Settings**

Click **Software Update**
Tap **Automatic Updates**
Turn on **Automatic Install & Download**
Go back to **Software Update** and tap **Update Now**

What is a Hidden Camera Scanner?
The Hidden Camera feature allows users to scan their home, hotel rooms, or other spaces for concealed cameras. Special filters enhance visibility, helping to detect potential threats and ensure your privacy and safety.
How to use
Point the scanner at the laptop camera and select a filter that provides the best visibility. Once you've chosen the appropriate filter, slowly scan the room with the camera to detect any hidden cameras.
Tip
Close the curtains and turn off the lights to make the room dark.

Use these filters and move your
camera around suspicious devices

You can add up to five emails for Data Breach checking

Scammers can use the exposed credentials to gain unauthorized access to your online profiles and acquire sensitive information.

Our data breach checker vigilantly scans for data breaches 24/7 and immediately alerts you if your data has been compromised.

When a data breach occurs, unauthorized individuals gain access to confidential information stored by an organization.
This information may include personal details such as names, addresses, email addresses, passwords, and even financial data like credit card numbers.

Once this information is exposed, it can be used for malicious purposes like identity theft, financial fraud, or unauthorized access to accounts.
It's important to keep your phone up to date.

Our app checks for missing updates and guides you through steps to resolve any issues.

An operating system check is crucial as it ensures that the system has the most advanced security protocols, reducing vulnerabilities and potential exploits that could compromise data and system integrity.
Bypassing software restrictions allows the installation of unverified files and software on your device. This poses a significant risk to your device's security.

It aims to safeguard sensitive information and prevent spying or unauthorized access to personal or confidential data.

It will guide you through the most effective steps to ensure data privacy and the best device performance.

Wi-Fi Scan analyzes the security of connected networks to prevent unauthorized access and data breaches. This ensures a safer online experience and protects valuable personal information.

A secure Wi-Fi network uses encryption, firewalls, and strict access controls to secure data transmission and prevent cyber threats, typically requiring a password to join.

Wi-Fi Security Type refers to the protocol used to protect and encrypt data transmitted over a Wi-Fi network, allowing only authorized users to access it.

The common types include WEP, WPA, WPA2, and WPA3, with WPA3 offering the highest level of security.

Please remove any unused emails to add a new one.

What's a security score?

What improves your score

How we calculate your security score:

85–100 points

50-84 points

0-49 points

Your security score shows how exposed your device is to external threats, such as viruses, spyware, or data leaks.

Regularly scanning your device for any spyware or suspicious apps

Deleting junk and potentially dangerous files from your phone and cloud

Monitoring data breaches and making sure to change your passwords or emails if they were ever leaked

Following our antispy & privacy setup checklists
Your information was a part of a data leak
We have not detected any security threats on your device
You haven't run a security scan in a while
If you've scored 100, your device and data are safe and sound—well done! If you're in the 85-99 range, there are a few things that you can do for extra protection, but they don't necessarily require immediate action.

This means we've detected a minor issue or there's a potential threat to your data. The app might prompt you to update your operating system or to recheck some of the accounts that share the same credentials, which increases their chances of being compromised.
If your score is below 50, immediate action is required. This means we've detected spyware, a hacking attempt, or a data leak that could allow someone to access your accounts.
Mark as done
Unmark as done
Choose the type of data you'd like to secure, and we'll guide you through all the steps.
Your setup is complete
Your setup progress
Recommended for you

It aims to safeguard sensitive information and prevent spying or unauthorized access to personal or confidential data.
It will guide you through the most effective steps to ensure data privacy and the best device performance.
Calls and text messages
Social media accounts
Local media files
GPS locations
Device security
Online browsing activity

Here are a few ways how you can protect your calls and texts from unwanted ears and eyes.
These simple tricks will help you strengthen your phone's security and minimize the possibility of data loss or device malfunctions.
If you don't want others to know your location, you can hide your actual location.

Stop others from accessing your photos, videos, and other media.
You might be giving social media apps too much info. It's easy to change that.
iPhone makes it easy to stay anonymous—as long as you have the right settings enabled.
Next steps:
Contact your mobile carrier
See who has access to your calls
Review app permissions
Use alternative messaging

Apps that have access to your microphone may be used to listen in on your calls. Let's check which apps have such permissions.
Permissions check:
Go to your **Settings**
Find **Privacy & Security** in the list
Choose **Microphone**
Look through the list of apps that have access to the microphone
Revoke permissions for the apps you don't trust

Several standard number codes can help you check if someone else has access to your calls. Let's go through them.
List of commonly used codes:
#61# to check if your phone has call forwarding enabled
#62# to check the status of call forwarding when your number is unreachable
#67# to see your call forwarding number
#004# for all forwarding information
##002# or **##21#** to disable all call forwarding options

How to use the codes:
Go to **Phone**
Input one of the codes
Tap **Call**

There’s a chance your SIM card can be cloned or used to intercept your calls. There are a few ways to make sure this doesn’t happen.
Secure your SIM:
Get in touch with your mobile carrier to find out whether there was any unusual activity connected to your number.
Consider getting an eSIM. It can’t be cloned or accessed if your phone gets lost or stolen.
Check whether your phone number has been a part of a data leak. You can do this through your Secure My Phone dashboard.

Considering how unreliable regular text messaging and calls can be, it is a good idea to choose third-party options with strong encryption protocols.
What you should know:
It’s better to avoid apps with a history of data leaks and scamming activities (WhatsApp, Telegram, etc.)
If you often share sensitive or confidential information via texts or calls, consider using Signal. It is one of the most heavily encrypted messengers on the market.

Secure your Apple ID
Configure your iOS profile
Unpair Bluetooth devices
Switch to biometric identification

When installing an app, it usually requests access to various system features and data, such as your location, camera, and microphone. You shouldn’t grant access to this data unless you're sure the app is trustworthy.
Let’s review all the permissions you gave:
Go to **Settings**

Regularly check your bank statements, credit card statements, and other financial accounts for any unusual or unauthorized transactions. Report any suspicious activity to your financial institution right away.
Be cautious of emails, messages, or phone calls asking for personal information. Cybercriminals may use the information obtained from a data breach to target you with phishing scams.
Use our app weekly so we can alert you about any data leaks that may occur within your accounts.
Open your device’s **Settings**

Click **Software Update**
Tap **Automatic Updates**
Turn on **Automatic Install & Download**
Go back to **Software Update** and tap **Update Now**

What is a Hidden Camera Scanner?
The Hidden Camera feature allows users to scan their home, hotel rooms, or other spaces for concealed cameras. Special filters enhance visibility, helping to detect potential threats and ensure your privacy and safety.
How to use
Point the scanner at the laptop camera and select a filter that provides the best visibility. Once you've chosen the appropriate filter, slowly scan the room with the camera to detect any hidden cameras.
Tip
Close the curtains and turn off the lights to make the room dark.

Use these filters and move your
camera around suspicious devices

Unlock Catcher
Record anyone who tries to unlock your phone.
How it works

What is the Unlock Catcher?
Photos
%s records

%s NEW

You need to grant camera permission to the Secure My Phone App to capture unlocks.

See the faces of anyone who has unlocked your phone, whether it's yours, your loved one's, or an intruder's.

Photos will be stored for one month before being automatically deleted. We recommend promptly reviewing any photos you take to ensure you capture important information.

Turn on the Unlock Catcher tool to discover who uses your phone when it’s not in your hands.

Keep the app open and lock your phone. This will help you reveal the faces of any intruders.

Open the Unlock Catcher report to see photos of everyone who has unlocked your phone.
